

Services to the Oil and Gas Industry

McVehil-Monnett Associates, Inc. (MMA) has been providing air quality permitting, modeling and monitoring services to the oil and gas industries since its inception in 1984. MMA's service base to these industries includes multimedia environmental management, planning, permit coordination and compliance assistance services. MMA's oil and gas services program is directed by Mr. James Easton, a gas industry veteran with over 30 years of experience in

environmental management, permitting and regulatory affairs. Working with Mr. Easton are experienced MMA professionals with demonstrated success in meeting the needs of oil and gas clients in Colorado, Wyoming, Utah, Kansas, Oklahoma, Texas, Louisiana and New Mexico.

MMA has extensive experience with gas sweetening and NGL processing plants, cogeneration facilities, booster stations and gas dehydration operations. Specific project experience includes the preparation of numerous air quality construction and operating permit applications, full spectrum air quality modeling, and ambient air quality and meteorological monitoring in support of state and federal permitting and compliance needs. In addition, MMA has extensive experience in control technology evaluations for gas compression and gas processing equipment, and emission inventories of fugitive emissions, storage tank emissions and other typical oil and gas sources. To assist MMA clients in managing compliance, experienced staff has also designed and implemented multi-disciplinary environmental management systems that review, evaluate, plan for and implement environmental compliance.
